

## HART devices available on (Rev J) System Cards and Resource CD

This database includes HART DD's that were first made available in the HART Communication Foundation (HCF) Library Release 2005 Number 2.

All other HART revision 3 or greater devices that are not specifically mentioned in this list would be supported as Generic devices.

Untested DD's listed are not loaded onto the System Cards at the Factory but are part of this Resource CD's "PC Database" and can also be downloaded from the internet.

To move the Untested DD's to a System Card of a unit, they must be manually added. See the Programming Utility Help (Manually Add/Remove DDs in a 375 Field Communicator) for further information.

Note: The Easy Upgrade feature is required to perform this procedure.
